## Intro

---

We recommend that all our facial treatments start with a full consultation and assessment with the Observ\*520x skin scanner to determine the correct treatment and homecare for your concerns. This is especially beneficial to determine the underlying structures of the skin where we will be able to see hydration, oil secretion, pigmentation and premature ageing of the skin. This will mean that your treatment is always specific to your skins needs and will focus directly on your primary concerns. Follow up treatments will then show you the progress made and treatments can then be adjusted accordingly.
